

Asset Label Materials

Vinyl (Gloss White)

Vinyl offers a good combination of performance and price. It prints well giving crisp images and barcodes.

Vinyl works well on curved or uneven surfaces.

Standard adhesives: P & R

Polyester (Gloss White)

Our standard gloss white polyester is a great choice for labels that need to be extremely tough and durable in harsh conditions.

This material comes with a high performance permanent adhesive that is able to withstand exposure to temperatures of 150 °C.

Standard adhesives: HPP

Polyester (Satin Silver)

Similar to our standard, gloss white polyester but with satin silver finish.

Standard adhesives: HPP

Destructible Vinyl (Matt White)

The combination of a high strength adhesive with the fragile vinyl means it is practically impossible to remove these labels without them fragmenting.

This makes them a great choice for asset identification because they are so tough to remove that they act as a deterrent to theft and they effectively prevent removal and re-application.

Standard adhesives: HPP

Adhesives

Permanent (P)

A general purpose acrylic adhesive.

Min. application temp.: 0 °C
Min. service temp.: -20 °C
Max. service temp.: 80 °C
Tack: High
Peel adhesion: Very high

Removable (R)

A general purpose acrylic removable adhesive.

Min. application temp.: -25 °C
Min. service temp.: -40 °C
Max. service temp.: 60 °C
Tack: Medium
Peel adhesion: Low

High Performance Permanent (HPP)

High performance permanent adhesive.

Min. application temp.: -5 °C
Min. service temp.: -40 °C
Max. service temp.: 150 °C
Tack: Very High
Peel adhesion: Very High
